

Juvelle AI Chatbot: Dialogue Behavior & Conversational Quality Plan

Engineering Specification: Emoji Stripping, Image Handling, Question Loop Elimination & 3-Hour Session Continuity

I. Summary of Identified Dialogue Issues

- **Unprofessional Emoji Spam:** Bot frequently appended star and flower emojis to nearly every sentence, diminishing conversational credibility.
- **Unconfigured Image Offers:** Bot prompted customers asking if it should send photos ('photo send cheyyatte?') when image sending is not yet enabled, causing dialogue deadlocks.
- **Question Loops & Pacing:** Bot interrogated users with multiple qualifying questions in a row rather than delivering immediate product facts and prices.
- **Mid-Conversation Greeting Reset:** Saying 'hi' mid-chat triggered the full initial welcome onboarding pitch instead of a natural check-in.

II. Core Architectural Solutions

- **1. Strict Zero-Emoji Default:** All template prompts, system prompts, and sanitizers enforce 0 emojis by default. Emojis are reserved only for critical context.
- **2. Explicit Image Policy:** Strict rule barring the AI from offering photos. Clear directions given to browse the Instagram page posts/highlights.
- **3. Direct Action Pacing:** Product inquiries are answered immediately with fabric, pricing, and size details without question loops.
- **4. 3-Hour Session Continuity:** Persistent turn inspection in SQLite ensures active sessions never reset when a user types casual greetings.
